**RELIABLE RISK DETECTION**

Healthy employees are essential for your company's productivity, product quality and image as a good employer. As a responsible business, you also prioritize protecting the environment and your local community. To do that, though, you have to constantly test workplaces at your production site for exposures to hazardous substances. Entrust the testing to an independent service provider! The public will trust the results more – and you will avoid tying up precious human resources.

# HEALTH RISKS AT YOUR BUSINESS FOREWARNED IS FOREARMED

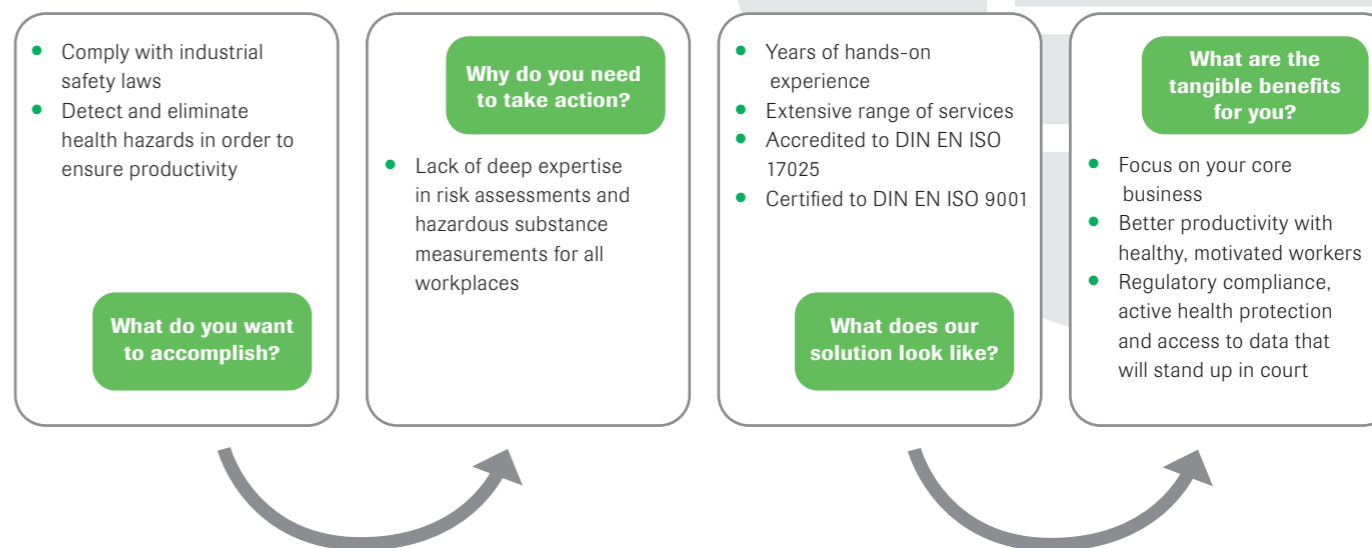

Trust Infracerv Höchst to test for hazardous substances at your business site – and solve a host of business challenges in one fell swoop:

You can detect the sources of hazardous substance exposures and eliminate them wherever possible, meet legal health and safety requirements, raise your productivity and protect your good public image and reputation as an employer.

Our measuring station for hazardous substances is certified to DIN EN ISO 17025. Experienced engineers, chemical technologists and chemical laboratory technicians identify and assess health risks posed by chemical gases, vapors or dusts at the workplace and advise you on ways to eliminate them. With their cross-industry expertise, they always know the best assessment method or measurement strategy and can suggest appropriate compliance measures to take.

As an independent testing body, the measuring station ensures regulatory compliance, active health protection and access to data that will stand up in court – for the roughly 40 companies based at Industriepark Höchst as well as other businesses throughout Germany that use chemicals. Our satisfied customers include chemical and pharmaceutical manufacturers, carmakers, producers of dyes, pigments, plastics and medical products, laboratories and many more.

## OUR VALUE PROPOSITION

### OUR SERVICE PORTFOLIO IN DETAIL

#### MEASUREMENTS OF AIRBORNE CHEMICAL AGENTS AT THE WORKPLACE PER DIN EN 482 AND TRGS 402

- Measurement planning, samples, laboratory analysis
- Exposure assessment report
- Data managed in a database and archived
- Guaranteed compliance with the control measurement plan

#### RISK ASSESSMENTS FOR HAZARDOUS SUBSTANCES BASED ON

- Hazardous substance/chemical agent lists
- Client-specific risk assessments and measurement results
- Local circumstances for processing, research, storage, etc. of hazardous substances

#### HAZARDOUS SUBSTANCES CONSULTING

- Strategies for reducing workplace exposure to hazardous substances
- Identification and classification of hazardous substances, preparation of safety data sheets and hazardous substance labels
- Preparation of health and safety protocols for rehabilitating or working in contaminated areas per TRGS 524 and DGUV Rule 101 004
- Determination of asbestos fiber concentration per TRGS 519
- Confined space atmospheric testing by an expert per DGUV Rule 113-004
- Determination of the carcinogenicity index of synthetic mineral fibers
- Indoor workplaces in accordance with the hygiene requirements for operating air handling units pursuant to VDI 6022 or cooling towers pursuant to VDI 2047
- Defense of the reports to the supervisory authorities

### HOW WE HELP YOU MEET YOUR OPERATOR RESPONSIBILITIES

- Identification of inhalation and dermal exposure and hazardous substance measurements per TRGS 402 and 401
- Indoor pollutant testing (public/private rooms)

### YOUR BENEFITS:

- Focus on your core business
- Protect your employees' health
- Obtain sound advice from a knowledgeable, highly experienced practitioner
- Raise your productivity with improved safety
- Obtain legally robust evidence of your regulatory compliance
